

AWS TURN Server Setup Guide for Xolox Meet

Goal: Configure a TURN server on AWS EC2 and send these 3 values back to the app owner: TURN_URLS, TURN_USERNAME, TURN_CREDENTIAL.

1. Create EC2 Instance

- ? Launch Ubuntu 22.04 LTS on EC2 (t3.micro is enough for testing).
- ? Assign an Elastic IP so the TURN address does not change after restart.

2. Configure Security Group (Inbound Rules)

- ? Allow SSH: TCP 22
- ? Allow TURN: UDP 3478 and TCP 3478
- ? Allow TURN TLS (optional): TCP 5349
- ? Allow relay media ports: UDP 49152-65535

3. SSH into the Server

4. Install Coturn

5. Create TURN User

6. Configure Coturn

7. Enable and Start Coturn

8. Verify Coturn is Listening

9. Send These Values to the App Owner

10. App Owner Final Step

- ? Paste the values into .env and restart the Node server.
- ? Test using two different networks (Wi-Fi and mobile data).

3. SSH into the Server - commands

```
ssh -i <key.pem> ubuntu@<EC2_PUBLIC_IP>
```

4. Install Coturn - commands

```
sudo apt update
sudo apt install -y coturn
```

5. Create TURN User - commands

```
sudo turnadmin -a -u xoloxuser -p 'StrongPassword123!' -r xoloxmeet
```

6. Configure Coturn - commands

```
sudo nano /etc/turnserver.conf

# Paste:
listening-port=3478
tls-listening-port=5349
fingerprint
```

```
lt-cred-mech
realm=xoloxmeet

user=xoloxuser:StrongPassword123!

external-ip=<EC2_PUBLIC_IP>
min-port=49152
max-port=65535

no-loopback-peers
no-multicast-peers
stale-nonce=600
```

7. Enable and Start Coturn - commands

```
sudo sed -i 's/^TURN_SERVER_ENABLED=.*/TURN_SERVER_ENABLED=1/' /etc/default/coturn
sudo systemctl enable coturn
sudo systemctl restart coturn
sudo systemctl status coturn
```

8. Verify Coturn is Listening - commands

```
sudo ss -lntpt | grep -E '3478|5349'
```

9. Send These Values to the App Owner - commands

```
TURN_URLS=turn:<EC2_PUBLIC_IP>:3478
TURN_USERNAME=xoloxuser
TURN_CREDENTIAL=StrongPassword123!
```

Notes

- ? If UDP range 49152-65535 is blocked, calls may connect but media can fail.
- ? If your EC2 public IP changes, TURN_URLS must be updated.
- ? For production, add TLS with a domain and certificate (turns:).
